Connective Tissue: Histophysiology, Biochemistry, Molecular Biology Nikolay Petrovich Omelyanenko, Leonid Ilyich Slutsky, Sergey Pavlovich Mironov

Connective tissue is a multicomponent, polyfunctional complex of cells and extracellular matrix that serves as a framework for all organs, combining to form a unified organism. It is a structure responsible for numerous vital functions such as tissue–organ integration, morphogenesis, homeostasis maintenance, biomechanical support, and more. The regeneration potential of connective tissue affects healing of damaged tissue and organs, while trauma, stress, and other factors that cause damage to connective tissue can lead to numerous disorders.

Connective Tissue: Histophysiology, Biochemistry, Molecular Biology brings together crucial knowledge of mammalian connective tissue (including human) and its components, both cellular and noncellular, in one authoritative reference. The breadth and depth of information has fundamental scientific significance as well as applied relevance in clinical medicine. The first half of the book covers the structure, classification, biochemical aspects, histogenesis, and cellular elements of connective tissue. It presents data from the macro- to nanolevel organization of the extracellular matrix?its structural and functional aspects?and addresses metabolic functions and the biochemistry and molecular biology of connective tissue ageing.

The second half of the book reviews current data on the biochemistry and molecular biology of skeletal connective tissue, including bone and cartilage metabolism and regulation. It presents an in-depth analysis of data on the molecular mechanisms of connective tissue ontogenesis, from embryonic development through ageing. It also reports novel findings on bone marrow stroma and describes electron microscopy results of the nanostructure of bone mineral, mineralized cartilage, and teeth compared with coral and seashells. Comprising both classic and modern data on the histopathology, biochemistry, and molecular biology of connective tissue, this book provides a unique resource for clinicians and researchers alike.

From reader reviews:

John Lyons:

Information is provisions for people to get better life, information currently can get by anyone from everywhere. The information can be a knowledge or any news even a concern. What people must be consider when those information which is inside former life are challenging to be find than now's taking seriously which one works to believe or which one typically the resource are convinced. If you receive the unstable resource then you buy it as your main information we will see huge disadvantage for you. All of those possibilities will not happen in you if you take Connective Tissue: Histophysiology, Biochemistry, Molecular Biology as your daily resource information.

Emilie Lechner:

A lot of people always spent all their free time to vacation or perhaps go to the outside with them family members or their friend. Do you realize? Many a lot of people spent that they free time just watching TV, or even playing video games all day long. In order to try to find a new activity this is look different you can read the book. It is really fun for yourself. If you enjoy the book that you simply read you can spent the entire day to reading a guide. The book Connective Tissue: Histophysiology, Biochemistry, Molecular Biology it doesn't matter what good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. In case you did not have enough space to create this book you can buy the particular e-book. You can more very easily to read this book from a smart phone. The price is not very costly but this book possesses high quality.

Madeline Cecil:

In this time globalization it is important to someone to acquire information. The information will make someone to understand the condition of the world. The health of the world makes the information better to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You will see that now, a lot of publisher that print many kinds of book. Typically the book that recommended to you personally is Connective Tissue: Histophysiology, Biochemistry, Molecular Biology this e-book consist a lot of the information of the condition of this world now. This kind of book was represented how does the world has grown up. The language styles that writer make usage of to explain it is easy to understand. The particular writer made some research when he makes this book. Here is why this book ideal all of you.

John Smithers:

What is your hobby? Have you heard which question when you got pupils? We believe that that issue was given by teacher for their students. Many kinds of hobby, Everybody has different hobby. So you know that little person similar to reading or as reading become their hobby. You should know that reading is very important and also book as to be the thing. Book is important thing to add you knowledge, except your own teacher or lecturer. You see good news or update in relation to something by book. Different categories of

books that can you choose to use be your object. One of them is Connective Tissue: Histophysiology, Biochemistry, Molecular Biology.
