A Course in Approximation Theory (Graduate Studies in Mathematics)

Ward Cheney and Will Light

A Course in Approximation Theory (Graduate Studies in Mathematics) Ward Cheney and Will Light

This textbook is designed for graduate students in mathematics, physics, engineering, and computer science. Its purpose is to guide the reader in exploring contemporary approximation theory. The emphasis is on multi-variable approximation theory, i.e., the approximation of functions in several variables, as opposed to the classical theory of functions in one variable. Most of the topics in the book, heretofore accessible only through research papers, are treated here from the basics to the currently active research, often motivated by practical problems arising in diverse applications such as science, engineering, geophysics, and business and economics. Among these topics are projections, interpolation paradigms, positive definite functions, interpolation theorems of Schoenberg and Micchelli, tomography, artificial neural networks, wavelets, thin-plate splines, box splines, ridge functions, and convolutions. An important and valuable feature of the book is the bibliography of almost 600 items directing the reader to important books and research papers. There are 438 problems and exercises scattered through the book allowing the student reader to get a better understanding of the subject.

From reader reviews:

Margaret Parker:

Here thing why this kind of A Course in Approximation Theory (Graduate Studies in Mathematics) are different and trusted to be yours. First of all studying a book is good but it depends in the content than it which is the content is as delightful as food or not. A Course in Approximation Theory (Graduate Studies in Mathematics) giving you information deeper including different ways, you can find any e-book out there but there is no guide that similar with A Course in Approximation Theory (Graduate Studies in Mathematics). It gives you thrill reading journey, its open up your eyes about the thing that happened in the world which is might be can be happened around you. You can bring everywhere like in area, café, or even in your technique home by train. For anyone who is having difficulties in bringing the imprinted book maybe the form of A Course in Approximation Theory (Graduate Studies in Mathematics) in e-book can be your substitute.

Hayden Wolfe:

The e-book untitled A Course in Approximation Theory (Graduate Studies in Mathematics) is the publication that recommended to you to read. You can see the quality of the guide content that will be shown to anyone. The language that article author use to explained their ideas are easily to understand. The copy writer was did a lot of investigation when write the book, therefore the information that they share to your account is absolutely accurate. You also will get the e-book of A Course in Approximation Theory (Graduate Studies in Mathematics) from the publisher to make you far more enjoy free time.

Ronald Tanaka:

The book untitled A Course in Approximation Theory (Graduate Studies in Mathematics) contain a lot of information on the idea. The writer explains your ex idea with easy method. The language is very clear to see all the people, so do definitely not worry, you can easy to read the idea. The book was authored by famous author. The author will take you in the new period of literary works. You can actually read this book because you can keep reading your smart phone, or product, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can available their official web-site and order it. Have a nice read.

Patricia Humes:

Is it anyone who having spare time after that spend it whole day by watching television programs or just lying down on the bed? Do you need something new? This A Course in Approximation Theory (Graduate Studies in Mathematics) can be the response, oh how comes? The new book you know. You are so out of date, spending your extra time by reading in this brand new era is common not a geek activity. So what these books have than the others?
