Deformation of the Continental Crust: The Legacy of Mike Coward - Special Publication no 272 (Special Publication) (Geological Society Special Publication) A C Ries, R W H Butler and R H Graham

This Special Publication, in memory and celebration of the work of Professor Mike Coward, is about the deformation of the continental lithosphere. The collected papers discuss geometry, structural principles, processes and problems in a wide range of tectonic settings and thereby reflect the breadth of Coward's interests. They encompass the evolution of Precambrian basement gneiss terrains, the geometry and evolution of thrust systems, basement involvement and structural inheritance in basins, syn-orogenic extension, salt tectonics, the implication of structural evolution on hydrocarbon prospectivity and structural controls on mineralization. Examples are drawn from the Lewisian and Moine Thrust Belt of NW Scotland, the Italian Apennines, NW Himalayas, the Cyclades, Oman, Zagros Mountains, Colombian Cordillera, Carpathians, North Sea, offshore Brazil, regional studies of the Irumide Belt (central Africa), Taurus Mountains (Turkey), greater South America, and from the Witwatersrand Basin of South Africa and the Antler Orogeny of SW USA.

Ricky Dotson:

As a college student exactly feel bored to help reading. If their teacher asked them to go to the library or to make a summary for some guide, they are complained. Just minor students that have reading's heart or real their leisure activity. They just do what the instructor wants, like asked to the library. They go to right now there but nothing reading really. Any students feel that examining is not important, boring and can't see colorful pics on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country.
